## INTERNATIONAL NON-PROFIT FOREST CERTIFICATION

---

FSC (Forest Stewardship Council®) is an international organization established to promote environmentally appropriate, socially beneficial and economically viable management of the world's forests. FSC logo on timber or wood products is a mark of that the product comes from environmentally appropriate and socially beneficial forestry.

According to the UN (UNECE), FSC certification is one of the fastest growing and developing forest certification systems in the world. The pace of development of the "green" market niche significantly excels the development rate of the non-certified niche.

The main purpose of FSC is to help environmentally appropriate, socially beneficial and economically viable forest husbandry and the world's forests management.

Ecologically appropriate forest husbandry stipulates the non-threatening timber procurement towards the biodiversity, productivity and ecological functions of the forest.

Socially beneficial forest husbandry provides the long-term benefits to the locals and society.

Economically viable management stands for sufficient economical benefits from the forest husbandry.

The Moda Collection successfully received:

Supply chain certification – COC certification (COC– Chain of Custody) to comply with the requirements standard that ensures the customers on the path taken by products from the forest to the point where the product is sold with an FSC claim and provide a credible assurance that products originate from well-managed forests or controlled sources.

## THE FOREST OF FORTÉ

---

At Forté we are passionate about the environment and all that it provides for us. In a world where deforestation is a real threat, we realise the importance of environmental responsibility and are actively taking steps to help preserve our beautiful forests for future generations.

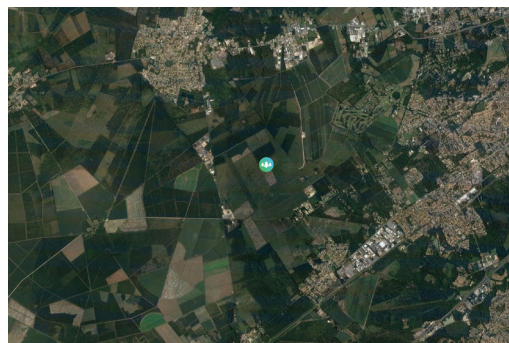

The majority of our products use Oak sourced from European and French forests. Although these forests are ethically maintained, it is

important for us to give back to the environment. We are working with local charities in Europe to replant forests in previously logged areas.

You can view the progress of the Forest of Forté here: [www.tree-nation.com/profile/forte](http://www.tree-nation.com/profile/forte)
